

Attachments for Order Pickers

Order Picker Attachments - Order picking is likewise referred to as order preparation operation. This is one of the key processes within a warehouse and consists of people called order pickers, taking and collecting articles in a certain quantity prior to shipment in order to complete customer orders. Order picking is an easy warehousing method. The efficiency in which this particular job is done can be directly connected to the productivity of a supply chain. Thus, order picking is amongst the most controlled logistic processes. Order picking falls within the category of the warehouse management system.

There are specific kinds of order picking which consist of: pick to box method, wave picking method, picker to part method or piece picking, sorting systems method and zone picking method.

The pick to box method comprises the order picker only filling the boxes with item that are from their specific station. The box then moves on to other stations until the order is finish. In this technique, there is no movement of the order picker personnel. In the wave picking method, the order pickers move all-around so as to collect the required items for some orders. The picker to part method or piece picking is similar where the order pickers or picker move to gather the stuff needed but for one order only.

In the sorting systems method, there is no movement of the order picking employees. Instead, the stuff are delivered to him or her via an automated system like for example automatic storage or a conveyor system. In the zone picking method, every order picker is assigned to one particular area. They are responsible for just realizing order picking in this specified zone.
